

SAP Basis

Printers and device type creations & adjustments
Spool system checks & analysis
STMS (Transport Management System) landscape build and management
Load balancing control and adjustments
Creation of system specific operation modes
SAP Language managements
Basis specific OSS note implementations
OSS connection setup & maintenance
Managing SAP Going Live Check services
Detail level System log monitoring and automation
SAP systems integration setup & controls
CCMS (Computing Center Management System) set-up and maintenance
SAP memory parameter management & controls
Setting up SAP archiving
SAP Early Watch report analysis and management
SAP data queue monitoring and management (TRFC, QRFC, IDOC, RFC etc.,)
SAP Background job management & monitoring
SAP housekeeping job setup and controls
Detail level system monitoring and reporting
SAP add-on installation & upgrades
SAP landscape management and system copy
SAP Client management & copy
SAP kernel upgrades

SAP Development

ABAP
Custom Development in SAP Environment
Development Support and Documentation
Machine Learning
SAP Leonardo
Deep Machine Learning
Python / Bots / Cluster / Blockchain
UI5 / Fiori
Front-end, User eXperience, HTML/CSS, JavaScript
Adaptive Fiori Apps
Re-Engineering
Custom Code Analysis and Support
Software re-engineering services

SAP Performance Management

Periodic performance reporting
Low performed ABAP code identification and reporting
System problem management and reporting
Background Job monitoring and reporting

SAP Data Archiving

Different types of SAP archiving product integration and support
SAP standard archive object analysis and archiving execution management
Based on SAP monitoring result analysis and automated archiving execution and monitoring
Detail level archiving reporting and database reorganization monitoring

SAP System Upgrades and Migration

SAP version upgrade planning and executions
Enhance experience of different SAP products upgrades and details level support
SAP Migration project planning and executions

SAP Database

Database parameter adjustments based on SAP system specific requirements
Database table/index analysis and optimizations
Database backup/restore executions & monitoring
Database tablespace & datafile optimization
Database performance overview (Buffer, Mem, SQL Stmt, Table/Index I/o etc.)
User and security analysis & adjustments
Database error monitoring and enhancements
Database reorganizations
Database patch management

SAP Landscape Management

Planning proper SAP landscape and execution
Cost effective project management and execution
SAP and non-SAP integration project planning and implementation
SAP Landscape optimization and standardization monitoring
SAP Performance overview and standardization

Operating System Optimizations

Operating system issue monitoring and upgrades
Operating system patch and security related upgrades
File system management and additional integrations
Operating system performance monitoring and upgrades
Planning proper High availability scenarios and execution
